As the Owner and President of Flood Protection NJNY, LLC, my first encounter with Architecture Metals and Flood Panel LLC was roughly three years ago in 2011.

I ordered five foot high Flood Panels for a building I managed. That year, we were hit once again with devastating flooding measuring 4 feet high against the building. But this time, the building was protected and saved from total devastation.

Witnessing firsthand how these panels held back the destructive rushing waters, I contacted Tom Osborne, President of Architecture Metals and Flood Panel, LLC to personally thank him. With the vast array of products Flood Panel, LLC had to offer, I found I could help protect countless other people. Ever since my first encounter in 2011, I have provided “Flood Panel LLC” products to my customers throughout New Jersey and New York City.

Although there are a few manufacturing flood mitigation companies, and I researched them all, I felt Architecture Metal and Flood Panel LLC had the most knowledgeable staff and offered the best products with the most solutions for the various applications I encountered.

When I weighed the costs of experiencing the down time of my business due to flooding destruction, and the expenses associated with clean-up, I found the products from Flood Panel, LLC a bargain.

Regards,
Bill Coleman
